

Fast, Strong, Safe, Durable – What more could you want?

Wadsworth's new 3 RPM VC-2000 drive unit for roof vents and roll-up side walls is two and a half times as fast as the original VC-2000. It does not sacrifice strength for speed. With 1500 in-lbs of torque, it has the power to lift open roof panels and raise long side walls.

"We saw a demand for a faster drive unit in new naturally ventilated greenhouse designs. Open roof panels, wing vents, and roll-up walls all have to close quickly when storms occur. Builders and growers liked the original VC-2000 drive units because they are easier to install than other choices, and because we have torque protection that others do not offer. The new 3 RPM version keeps those features, but works faster" says Gary Dean, President, Wadsworth Control Systems.

This fast drive unit does not skimp on safety. It has Wadsworth's unique torque override protection that stops the motor if binding or obstruction occurs. It is still the easiest motor to install, and still features Wadsworth's durable design that lasts decades.
