

## Two Cents Idea For Sidewall Ventilation

McCrary's Sunny Hill Nursery, located in Eustis, Fla., recently replaced the tube motors for its side roll-up walls with Wadsworth VC-2000s. According to head grower Mark Sineath, "I've got the drive unit mounted in the center of the side wall, the system's been in a year and I've had no problems. The internal limits are easy to set and it's a really good motor. It takes an Indiana boy to put it up there, but it's strong and lasts a lot longer."

Sineath points out that, although a retrofitting costs about \$1,200 per drive unit, that price isn't outrageous considering that it requires two \$400 tube motors, needing annual replacement, to do the same job.
